

BRIAN KIPCHIRCHIR

Aspiring Full-Stack Developer

Nairobi, Kenya | +254 717 320 304 | kipchirchir.lb@gmail.com | github.com/Briankipchirchir77 | [LinkedIn](#)

PROFILE

Full-stack developer in training with hands-on experience building and deploying applications using React, Flask, and REST APIs. Brings a strong foundation in problem-solving, structured planning, and clear communication from a background in special needs education — skills that translate directly into writing user-focused code, breaking down complex problems, and collaborating effectively within development teams. Combines a detail-oriented, empathetic approach with practical full-stack project experience, including a deployed civic-tech platform.

TECHNICAL SKILLS

Languages: JavaScript, Python, HTML, CSS

Frameworks & Libraries: React, Flask

Concepts & Practices: REST APIs, full-stack application architecture, responsive design, version control (Git), deployment (Render), problem decomposition

Currently Deepening: Flask backend development, REST API design

Tools: Stata (statistical/data analysis)

PROJECTS

Fahamu *Full-Stack Web App — React, Flask, REST API — Deployed on Render*

A civic-awareness platform that gives Kenyan citizens one centralized place to track scheduled power outages, water supply interruptions, and KRA tax filing deadlines.

- Built and shipped a full-stack application end-to-end, with a React frontend and a Flask backend deployed live on Render.
- Designed the data model and REST API to keep frontend and backend cleanly decoupled, enabling fast iteration on new civic data types.
- Targeted a practical, underserved problem — utility disruptions and compliance deadlines — that directly affects households and small businesses.

Live: fahamu.onrender.com | GitHub: github.com/Briankipchirchir77

Me Too *JavaScript — Early-stage, full-stack architecture planned*

A social platform concept connecting people through genuinely shared interests rather than surface-level matching.

- Built core matching logic and UI in JavaScript, with the architecture planned to expand into a full-stack app (React frontend, Flask backend).
- Designed the interest-matching approach to prioritize meaningful, lasting connections over superficial criteria.

EDUCATION

Software Engineering Program — Moringa School, Nairobi

Feb 2026 – Aug 2026 (in progress) | Focus: HTML, JavaScript, React, Python, Flask

Bachelor of Special Needs in Education — Mount Kenya University, Thika

May 2017 – Mar 2020 | Second Class Upper Division

Certificate in Kenya Sign Language — Kenya Institute of Special Education

Feb 2022 – Jul 2022 | Credit

PROFESSIONAL EXPERIENCE

Learning Support Teacher, Grades 4–6 — Light International School, Nairobi

Nov 2024 – Present

- Designed and tracked individualized learning plans, applying structured, data-informed problem-solving to measure progress — a process analogous to debugging and iterating toward a defined outcome.
- Collaborated with teachers, parents, and specialists to adapt strategies in real time, building cross-functional communication skills relevant to agile development teams.

- Documented outcomes and presented clear, structured reports — transferable to technical documentation and stakeholder communication.

Special Needs Agent — County Government of Bomet

Jan 2024 – Oct 2024

- Gathered and organized field data through assessments and outreach to ensure accurate eligibility records, demonstrating attention to data integrity.
- Coordinated across government officials, community leaders, and caregivers, strengthening stakeholder-management skills.

Homeschool Tutor (British Curriculum, KS2–KS3) — Private, Nairobi, Kenya

Feb 2023 – Dec 2023

- Delivered personalized instruction and adapted teaching methods to individual learning styles, reflecting strong self-directed learning and adaptability.
